Dollar value in a day

Introduction

People can obtain dollar value in a day when they give their time to someone else in an employment situation. In exchange for time and work effort, the employer pays a wage. We can quantify the dollar value of a day's work by multiplying hours of employment by the hourly wage rate earned. Although dollars are not exchanged in the home in the same manner as in employment, when persons perform household work, their activities have important economic benefits as each household member's life is likely improved with the total services performed in the household. If, for some reason, work and services performed in the household require replacement or supplementation, a market exists where people can hire those willing to perform various household work tasks as a job. In addition to providing household work, people use their time at home to support their household members emotionally and physically, creating additional economic value. They also use time to maintain or enjoy themselves. Certainly, eating, resting, and leisure are valuable activities.

In this report, we calculate a market estimate of the value attained with time use or the cost needed to support or replace time use. Relying on pooled 2003 to 2023 time-diary data from the U.S. Department of Labor's Bureau of Labor Statistics' (BLS) *American Time Use Survey* (ATUS) and a wage survey produced by the BLS, we calculate the value created in a day as measured by the price of hiring persons whose marketplace work relates to the time use of people during a day. Multiplying time use hours in an activity by a relevant hourly market price of hiring workers within that activity creates a replacement value or a cost to produce or supplement the use of time.

Time-diary surveys record activities by the amount of time spent on the activities. Depending upon the day, persons might be working 8 hours outside the home at a job and working 4 hours at home doing cooking, cleaning, or other household chores for the benefit of themselves and family members. It makes sense that all the work hours in the day have an economic dollar value. Multiplying the hourly wage in employment by 8 hours and the hourly wage of perhaps a maid times 4 hours, we can arrive at the dollar value of the 12 hours of work performed by the person on that day. For the remaining 12 hours in the day, dollars may or may not be relevant to decisions regarding time use, and when

dollars are relevant, that time use might not ever need to be valued, replaced, or supplemented.

The value of time, when viewed as the output created from time, ranges from measurable to invaluable—some time use has a market price while other time use does not. The time spent reading a book to a child can be considered priceless by parents (and children); however, a direct and measurable economic value of the activity is the market cost to hire someone to read a story to a child. When we sleep, we provide value for our household through our availability for protection, care, or comfort—how many wives sleep less comfortably when their husbands are away from home on business? What is the value to the timid when the bravest household member investigates noises at night or the care available for the sick? Obviously, guards and nurses perform protection and care services for sleeping persons, and their wage rate would be a reasonable place to begin to price such service activity, if required.

The replacement valuation analysis is extendable to every activity performed in a day. It is most relevant when time is lost or service is required during a specific time allocation or activity. An injury may require that someone needs help eating, dressing, bathing, or monitoring his or her sleep or any other daily activity. How much would it cost to hire assistance or monitoring during this time? In many situations, dollar values of time represent or relate to the value generated or received with time usage. Realistically, not all valuations of time are appropriate, so the application by the user of the data in this report for a specific valuation must be evaluated within the context of its purpose. For example, most dollar valuations of time using the replacement valuation method are only relevant when an activity is lost or assistance is required for activity completion.

It is beyond the reach of economic analysis to determine the actual value of every usage of time to one person. As such, the dollar value of a day presented in this report is a day's 'market shadow value.' The estimates of value presented in this report relate to the cost to employ someone to work in the confines of activities that a person might perform in a day without regard to how individuals might value specific time use. The dollar value in the day is the sum across activities of the multiplication of hours and assigned value based upon hourly wage rates. The market cost of hiring someone to shadow time usage does not presume that the hourly cost precisely represents the value in performing or

Expectancy Data

Economic Demographers

replacing a specific person's activities, only its market cost equivalence within the categories of time use. Returning to the story-reading example, the value to the child of his or her own parent reading to them and spending time with them would likely exceed that of a stranger.

Group value

Societal value reveals itself from the time-use behavior of groups of people. As such, we often describe societies by what they do with their time, and many studies have followed individuals' detailed activities for a long time. Two problems often occur in that research: (1) the time surveyed is often too short to provide insight into all of one person's life activities, and (2) the number of subjects in the studies is relatively few.

In this report, we analyze the time spent by 245,139 persons in one day of their lives as surveyed from 2003 through 2023—many people but a short amount of time per person. The person-days are evenly scattered across the days of the week of two years; they represent persons over the age of 14 in the entire United States.¹ The time spent by each group member of 245,139 persons reflects the value society received from using these $245,139 \times 1,440$ minutes. The day's life conditions and resulting individual time allocations determined the amount of time spent by each person on each activity during the survey day. Our data set is comprised of 353,000,160 minutes of time use. For each minute, the BLS ATUS survey codes the primary activity performed by the individual, the person's location at that time, and who the person was with. As a group, our valuation relates to time spent recorded by who, what, how long, where, and who with considerations. We condensed the average time allocations into 27 detailed activity groupings, which then are accumulated into 5 major activity groupings.

Individual value

Most individuals value what other people in society do with their time because they often do similar activities within their available time. One person might have mowed his grass on a specific survey day, and another might have gone to the movies. With that pattern of time use between two people, we do not have to conclude that the grass mower never goes to the movies or the movie watcher never mows grass. When we are

confident of a well-stratified survey group, we can generally derive individual value by looking at the totality of time spent by the group on a specific activity. If we divide the total time the group spends in each activity by the number of members, we construct an average activity day for the group. We then present the individual replacement value of the time use during the average activity day.

The dollar value in a day represents value, not the determinant of value. Some people value an activity while others do not, and some are better at performing some activities than others. The dollar value in a day from an individual perspective is important when that person loses the ability to perform an activity or loses the use or benefit of someone else's time. Using the representative value approach, the often non-dollar exchanged time allocations become important. For example, suppose an injury prevents an individual from performing their housework. What dollar amount will be required to hire someone to perform the average hours of housework his or her peers perform?

The dollar value in a day does not address whether a person would ever want or need to hire someone to perform or assist with their activities. It also does not represent all the opportunity costs in the performance of activities nor the individual-to-individual productivity obtained with time use. *The Dollar Value of a Day* is a dollars and cents pricing of economic value using actual observed average behavior and actual market-based wages paid to those willing to give up their own time to perform an activity for someone else. It would be impossible for a living person to lose all of the value of their time. Likewise, it would be impossible for someone to access all of the value of someone else's time. Therefore, we do not expect that our impersonal valuation of individual activity would necessarily be equal to the personal dollar value of an entire day.

The dollar value in a day can only address the primary usage of each minute. When a mother is primarily cooking a meal, she may also be supervising her children. When a mother is lost, the child loses the direct provision of a meal and the supervision and care that took place while the mother was cooking. Such situations provide examples of why all time uses must be measured and valued. If a person is primarily doing one activity, they might also do another simultaneously. A father and son could each be mainly enjoying their

¹ For a discussion of the ATUS data set, refer to the section of this report on survey methodology. All ATUS documentation and data can be found at the ATUS Internet site <https://www.bls.gov/TUS/>.

leisure at a ballgame, but the father also provides supervision and guidance to his child during the time spent at the game. It is impossible to determine a dollar value for each component of value provided with each minute of the day; therefore, *The Dollar Value of a Day* offers a valuation only of one primary activity per minute. However, we do provide the capability of examining “who with” and “where” questions during primary activities by providing estimates of time spent a secondary childcare (which we later discuss), time spent with family members (spouses, children, and parents), time spent at home, and time spent alone.

Dollar Value of a Day methodology

The Dollar Value of a Day provides one possible valuation of time. Our valuation is constrained by the decisions made by the time diary data collectors regarding the categorization of time into various activities and the sampling methodology of the survey. The time diary data used in this report are the only such data provided by a federal statistical collection agency, and the ATUS is the largest time survey ever undertaken in the United States.

In assigning dollar values, we use a United States Department of Labor survey that provides their largest survey of wages by occupation and geographical area. Although the dollar valuations are presented in the summary tables based on average wages in the United States, we present a wage adjustment factor to isolate state and metropolitan area wage variations. The wages used to determine value are averages and do not reflect the skills or efficiencies that individuals may possess in performing specific activities.

Recognizing the cost to hire individuals includes more than an hourly wage; we add an amount to each wage rate to account for legally required employment taxes or benefits paid by private industry employers of part-time workers. We do not address other voluntarily paid benefits or any income taxes employed workers pay. We also do not address the costs of searching for prospective ‘employees’ or monitoring their output. We do not expect everyone to agree with every aspect of the hourly values we selected for each activity, and other legitimate measures exist in the time valuation literature. The dollar values presented here should be regarded simply as one possible reasonable and reliable valuation. Sufficient information is presented regarding the hours of time use by category for anyone to calculate his or her dollar value of a day.

Providing time use estimates for many demographic traits is desirable; however, any analysis is

dependent upon survey sample size. Time-diary studies are expensive to complete, and as such, sample sizes are relatively small when compared to other large, regular surveys like the BLS/Census’ *Current Population Survey*. Although we use data from the largest time-diary study ever completed in the U.S., we face data limitations in several demographic classifications. In this edition, we publish time-use estimates for persons somewhat in the same manner as the BLS chooses: estimates are published for a demographic grouping if there are at least 290,000 population-weighted respondents. Population and respondent sizes are shown in each demographic table. The significance of the results from small demographic subgroups should be evaluated by evidence of consistency with other similarly related demographic subgroups with larger sample demographic subgroup sizes.

We present two groups of results. The first group is limited to age and gender, and the second group adds the household characteristics of marital status, presence of children, and labor force status. Because of differing obligations, we expect that the structural use of time varies amongst persons with these demographic traits. In making demographic classifications, we were sensitive to maximizing detail while maintaining sample size in the subgroups presented.

The presentation of the results is limited to the average allocation of a day by demographic trait. For example, we present the average amount of time devoted to cooking and cleaning by married males with children. The discovery of time usage is limited to the demographics of the subject. Other empirical analyses of time-diary data often include regression analysis to show the effects of the varying categories within the demographic traits on the time allocations. For example, the dependent variable would be time spent cooking and cleaning, and the independent variables might include single or married dummy variables and a variable for the number of children and other relevant traits. The coefficients from the regressions would be used to build the average hours of cooking and cleaning by single males with children. In this report, we do not perform statistical regression analysis. We do so primarily for two reasons:

- (1) We are interested in the average allocation of time use by a group instead of variations of time use within the entire population. We are not trying to explain intra-sample differences within a day. If one group of persons perform more (less) of a subset of activities, they would have to perform less (more) of the remaining

Expectancy Data

Economic Demographers

activities. In this study, we are not interested in trying to explain these mixtures of time across demographic groups.

- (2) Since each person is represented in the sample by only one day, regression analysis pointing to micro-level characteristics might not accurately represent all anticipated time allocations.

Although regression analysis of time allocation is outside the scope of this study, its use is appropriate in other contexts. Since this report focuses on the value generated by specific groups of people, regression analysis was not relevant.

Contents of this report

This report contains explanatory text and descriptive tables. This section discusses common survey methods used to measure time use. We then present the important methodologies of the ATUS. Documentation of *The Dollar Value of a Day* consolidation and valuation follows. The results of this study, in tabular form, are in the table section. When required, each table has an explanatory note.

Surveying time use

Introduction

The two common survey methods used to discover how people use their time are ‘direct questions’ and ‘time diary.’ In direct question surveys of time usage, the interviewer suggests an activity, and the respondent collects and determines the total time they devoted to the activity.² Time-diary surveys ask respondents to record every activity they perform in time sequence. Most demographic surveys are direct question-based. In these surveys, interviewers ask questions like “How many hours did you work last week at your main job?” or “How much time do you spend on housework in an average week?” Most time-based surveys consist of time diaries.³ In the ATUS, the interviewer collects a detailed account of the respondent’s activities from 4 a.m. the previous day to 4 a.m. on the interview day. For each activity reported, the interviewer asks how long the activity took place (recorded as duration or with start and stop times). The interviewer then asks ‘Who With’ questions for all activities except sleeping, grooming, and working, and then ‘Where’ questions for all activities except sleeping and grooming. After the respondent reports an activity (including duration, with whom, and where), the interviewer prompts the respondent for his or her next activity.

Direct questions

Direct questions about the use of time are often contained in lengthy questionnaires that first require the individual to isolate the specific activity they are asked about and then provide an estimate of the total time they spent on that activity. This contrasts with the time-diary method of first isolating the time and then determining the activity. Studies comparing time-diary to direct-question data find that direct questions typically produce higher time estimates than time-diary questions, especially for frequent activities.⁴ Direct questions produce lower estimates for infrequent activities, possibly because a more extended recall period is required.⁵ Marini & Shelton⁶ compare data from the National Survey of Families & Households (NSFH) and the Michigan Survey of Time Use and find that, generally, the NSFH

estimates, based on direct questions, result in higher time estimates but slightly lower estimates of task segregation. In general, the quality of direct-question and time-diary measures is improved using narrowly defined tasks. A direct question not narrowly defined is “How much time do you spend on housework in an average week?” It is challenging for a respondent to provide an accurate estimate to this question in a few short seconds of response time during a lengthy interview containing many other recall matters. It is also expected that respondents would interpret the definition of housework differently (e.g., does housework include washing the car?).

When interviewers ask persons a series of direct questions regarding their time allocation, sometimes the sum of the responses exceeds 24 hours a day. For example, many mothers report caring for their children 10 hours per day, but they also report working 40 hours a week, sleeping 56 hours a week, and doing 35 hours of housework a week. The reported retrospective use of time reveals 201 hours of time use in a 168-hour week! While the mother may likely be near her children 70 hours per week, instead of childcare being her primary activity, she might be doing housework, watching television, or relaxing.

Time diaries

Time diaries differ in various ways, including whether respondents complete the diary during the day for which data are collected or whether they complete a diary retrospectively. Retrospective diaries completed one day later, compared to ongoing diaries, have almost equal value.⁷ Retrospective diaries are less expensive than ongoing diaries because only one visit by an interviewer is required. Since activities are only surveyed for a specific period, time diaries are sometimes problematic because the diary day does not represent the general pattern of activities in the person’s life. This potential problem is handled in most studies by random population sampling each day of the week throughout the year. Sometimes, it is difficult to obtain data around major holidays when persons are unavailable for surveying

² Surveys of this type include the U.S. Census, the Current Population Survey, and the Michigan Panel Study on Income Dynamics.

³ The well-known surveys of time use using diaries are by the Survey Research Center at the University of Michigan in 1965-1966, 1975-1976, and 1981 and by the Survey Research Center at the University of Maryland in 1985.

due to travel and not being at home to answer a survey of their previous day's activity. It is also difficult to deal with separating tasks that are performed simultaneously.⁸

Time-diary data provide a unique perspective as to how people use their time. Analysis of time-diary data such as this report provides important reference points to evaluate the general responses to direct questions regarding time usage. To facilitate analysis, we consolidate responses into activity groups. For example, activities such as clearing the table and cleaning the refrigerator pertain to food clean-up. As such, when these types of responses are given to the interviewer, the time spent on these activities is grouped together into one category. Most time-diary studies consolidate raw responses into relevant category groups. Once coders consolidate the time data into detailed categories, the researcher can group the categories for analysis. The unique feature of time-diary analysis is that if a person is performing one grouped activity, they are not performing another. For example, in the classic economic example of the work-leisure tradeoff, if a person spends 10 hours in a day at work, he or she has 10 fewer possible hours of leisure in that day.

Each day, people alter their allocations of time. We do not always work 8 hours, sleep 8 hours, perform housework for 2 hours, and enjoy leisure for the remaining 6 hours. By circumstance, some people devote more time to one activity and less to others. The advantage of time-diary surveys over most direct question surveys is that we can analyze the allocations of all time usage. For example, from the Panel Study of Income Dynamics, we might learn that in a week, a substantial group of persons worked 40 hours. The average housework direct question response for this group might be 21 hours. We do not know what happened in the remaining 107 hours of time in that week. Suppose there are two equal-in-size sub-groups, A and B. Sub-group A answered 28 hours of housework and Sub-group B answered 14 hours of housework. The Michigan direct-question survey of the time allocation only has questions on work and housework. Sub-group A might enjoy 100 hours of personal leisure. Sub-group B might perform 21 weekly hours of caring for a disabled family member in the home and use the remaining 93 hours for personal leisure. The conclusion made from the data regarding output, work plus services, from the limited direct question

survey is that the output of Sub-group A exceeds the output of Sub-group B when, in fact, actual household service output is the opposite. With time diary data, we do not have a problem with missing hours and activities.

When a time-diary study surveys one day of a person's life, the survey must have enough activity categories to take a snapshot of time usage effectively. One person in the survey group might be on vacation, another might be sick that day, one might be building a new deck on their home, and yet another might have to pull a double shift at work. As the number of persons in the group increases, the possibility for varying activity participation rises. Therefore, when analyzing time-diary responses, it is important to balance the detail of the demographic groups presented with the number of activities studied to ensure representative activity participation throughout the survey period.

Robinson (1977), Sanik (1981), Stinson (1999), Walker & Woods (1976), and Warner (1986).

ATUS time diary survey methods and definitions

Introduction

The time-diary data analyzed in this report are from the U.S. Department of Labor's Bureau of Labor Statistics' (BLS) *American Time Use Survey* (ATUS). The BLS provides complete documentation of the ATUS survey at their website devoted to the ATUS (<http://www.bls.gov/tus/home.htm>). To learn about the ATUS survey design and procedures, the reader should refer to the ATUS documentation on the BLS website. In this section, we present for quick reference *extracted key sections* of the ATUS documentation and definitions of ATUS concepts used within this report.

Survey design

The ATUS is sponsored by the BLS and is conducted by the U.S. Census Bureau. The Census Bureau collects ATUS data under the authority of Title 13, United States Code, Section 8. Section 9 of Title 13 requires that all information about respondents be kept strictly confidential and that the information be used only for statistical purposes. Designated persons are informed of their confidentiality rights under Title 13 in an ATUS advance letter and brochure mailed approximately 10 days before the interview. The ATUS advance letter also advises designated persons that this is a voluntary survey.

The ATUS randomly selects individuals from a subset of the households that complete their eighth and final month interviews for the *Current Population Survey* (CPS). ATUS respondents are interviewed only one time about how they spent their time during the previous day, where they were during each activity, and whom they were with during each activity. ATUS covers all residents living in households in the United States at least 15 years of age, except for active military personnel and people residing in institutions such as nursing homes and prisons. The ATUS sample is drawn from the CPS, so the ATUS universe is the same as the CPS universe. The universe for the CPS comprises the approximately 115 million households in the United States and the civilian, non-institutional population residing in those households. From this universe, the CPS selects approximately 60,000 households every month. About one-eighth (or about 7,500) retire permanently from the CPS sample each month after their eighth CPS interview attempt. Two months after households complete their eighth CPS interview attempt, they become eligible for selection into the ATUS sample.

After the CPS sample is sub-sampled to obtain the ATUS sample, the ATUS sample is distributed across the States approximately equal to the proportion of the national population each one represents. In the second stage of selection, households are stratified based on these characteristics: the race/ethnicity of the householder, the presence and age of children, and the number of adults in adults-only households. Sampling rates vary within each stratum. Eligible households with a Hispanic or non-Hispanic black householder are over-sampled to improve the reliability of time-use data for these demographic groups. To ensure adequate measures of childcare, households with children are also over-sampled. To compensate for this, households without children are under-sampled. In the third selection stage, an eligible person from each household selected in the second stage is randomly selected to be the designated person for ATUS. An eligible person is a civilian household member at least 15 years of age. All eligible persons within a sample household have the same probability of being selected as the ATUS-designated person.

To form the ATUS monthly sample, a portion of the households leaving the CPS sample was selected for the ATUS each month. The monthly sample is then divided into four randomly selected panels, one for each week of the month. To ensure good measures of time spent on weekdays and weekend days, the sample is also split evenly between weekdays and weekend days. During the assignment of sample codes, 10 percent of the sample is allocated to each weekday, and 25 percent is allocated to each weekend day. The designated persons are then randomly assigned a day of the week they will be reporting and an initial interview week code (the week of the interviewing period when the case is introduced).

Data collection

An advance mailer is sent to all ATUS-designated persons to notify them that they have been selected for the ATUS sample. The advance mailer contains a letter and a brochure explaining the nature of the survey and why ATUS contacts CPS respondents. It also gives ATUS telephone and Internet contact information. All ATUS data are collected using computer-assisted telephone interviewing (CATI). CATI automatically inserts any answer a respondent gives at the beginning of a survey, such as a child's name, in corresponding later questions. CATI also verifies that all questions have been

answered and that a respondent's answers are consistent throughout the questionnaire. CATI alerts the interviewer if there is a problem so that it can be resolved during the interview.

The ATUS sample is randomized by day, with 50 percent reporting about weekdays, Monday through Friday, and 50 percent reporting about Saturday and Sunday. About 10 percent of the sample is allocated to each weekday. Designated persons must report their activities on their designated day without substituting days. A designated person aged 15 or older is selected randomly from each household to participate in the interview without substituting or proxy responses. All responses are obtained directly from this designated respondent.

Households that did not report a telephone number in their last CPS interview make up approximately 5 percent of the ATUS sample. ATUS includes these households in its sample to be a nationally representative survey. These households also receive an advance mailer, but instead of providing a date when the designated person will be called, the letter asks the designated person to call the telephone center on a specified day to complete the interview. In addition to the letter and the brochure, the advance mailer for households that lack a telephone includes an incentive in the form of an inactivated debit card for \$40. The debit card can only be activated with a PIN number provided to the respondent by the interviewer after the interview.

Interviews

The ATUS questionnaire contains both English and Spanish text. The ATUS interview is a combination of structured questions and conversational interviewing. It consists of four major topics: the household roster, the time diary, the summary questions, and a section related to the CPS. The portion of the interview relating to the CPS is broken up into four sections: employment status, looking for work, industry and occupation update, and earnings update.

Following the introductory contact section of the survey, the data collection begins with a review of the household roster to verify and update the roster to reflect any changes in the household since the last CPS interview. Next, the respondent's labor force status is determined as whether the respondent worked in the previous 7 days or was looking for a job, on layoff, retired, or disabled. Next, the time diary portion of the interview begins to collect a detailed account of the respondent's activities, starting at 4 a.m. the previous day and ending at 4 a.m. on the interview day. For each

activity reported, the interviewer asks how long the activity lasted, who was in the room or accompanied the respondent during the activity, and where the activity took place. For the time-use diary, the interviewer uses conversational interviewing rather than asking scripted questions to allow the respondent to report on his or her activities comfortably and accurately. This technique also allows interviewers to use methods to guide respondents through memory lapses, to probe in a non-leading way for the level of detail required to code activities, and to redirect respondents who are off task or providing unnecessary information. The interviewer records the verbatim responses on a new activity line as each activity is reported. The interviewers are trained to ensure that the respondent reports activities (and activity durations) done on the previous (diary) day, not activities done on a "usual" day. Interviewers do this by emphasizing the word "yesterday" throughout the interview.

After completing the time diary, the interviewer asks follow-up questions to gain additional information on the respondent's work, childcare, and volunteer activities. The interviewer first asks questions to identify activities that were done as part of the respondent's job and then asks about any income-generating activities that were not part of the respondent's main or other job. Next, the interviewer asks about activities and times when a child was in the respondent's care (other than the already mentioned primary childcare activities). Secondary childcare activities are captured separately for the respondent's own children that live in the household, own children that live in another household, other (non-own) household children, such as siblings or grandchildren, and non-own nonhousehold children, such as a neighbor's children. The interviewer then asks the respondent to identify any volunteer activities done for or through an organization. The last questions in this section elicit information on any overnight trips of 2 or more nights during the month before the interview.

The next three sections review (a) any unemployment or disability and whether the respondent is looking for work, (b) industry and occupation information, and (c) earnings and school enrollment. After the interview ends, the interviewer records any notes that may help code the diary data. If the interview is incomplete, the interviewer makes an appointment to call back on the same day or another designated day.

Coding the data

The ATUS coding lexicon, or activity classification system, was originally based on the one used for the

Expectancy Data

Economic Demographers

Australian Bureau of Statistics 1997 time-use survey. During a lengthy developmental phase, which included several coding and usability tests before the start of official ATUS data collection, the ATUS lexicon underwent many revisions. The result is a 3-tiered system, with 17 major, or first-tier, categories, each having 2 additional levels of detail. Each third-tier activity category also contains a list of examples of activities that fall into that category.

Coders at the telephone center assign a six-digit classification code to each diary activity. The first two digits represent the major activity category; the next two digits represent the second-tier level of detail, and the final two digits represent the third, most detailed activity level. Because of the complexity of coding, everyday activities are reported in many ways into narrowly defined lexicon categories, and coders use a comprehensive set of rules to guide their decisions. Rules applicable to each major lexicon category are available in a rules manual, as are miscellaneous rules—such as how to code passive, waiting, or watching activities—that apply to many categories.

ATUS is unique in that it is the only survey conducted by the Census Bureau that uses the same personnel to do interviewing and coding, rather than referring collected data to coding specialists. Interviewers code one another's cases, though never their own. This process is used because knowing the coding lexicon categories gives interviewers a better understanding of the importance of probing for helpful information and recording activities properly, making coding easier. Personnel undergo thorough coding and review/testing.

The accuracy and consistency of coded ATUS data are critical to the usefulness and validity of the survey. The telephone center uses a verification and adjudication system for quality assurance purposes. All cases are 100-percent verified, meaning that two different coders code each case. First, a coder assigns six-digit activity codes to all time-use data from a completed case (although not a case he or she completed as an interviewer). Second, a different coder (the “verifier”) recodes the same case without seeing the original coder’s assigned codes. If the original coder and the verifier agree on all activity codes, the case is closed, and the data are ready for processing. If any activities have mismatching activity codes, the entire case is transferred to an adjudicator, a supervisor, or a coach with ATUS coding experience. The adjudicator assigns a correct code for disputed activities and then closes the case. The adjudicator also assigns an error code to the coder or verifier (or both) who assigned the incorrect code. Through coding

error reports and informal discussions, supervisors or coaches give coders and verifiers feedback on why any activities were recoded.

Weighting and data limitations

Generating ATUS weights involves several steps. Because ATUS cases are selected from the Current Population Survey (CPS), the CPS weights (after the first-stage adjustment) are the basis for ATUS weights. These base weights are adjusted to account for the fact that less populous states are not over-sampled, as in the CPS. Further adjustments are made to account for the probability of selecting each household within the ATUS sampling strata and the probability of selecting each person from each sample household. The non-response adjustment increases the weights of records of interviewed persons to account for eligible sample persons who were not interviewed in the ATUS. This adjustment is computed separately for each reference day.

ATUS weighted estimates of persons in age, gender, race, and ethnicity cells match corresponding CPS estimates. Race and ethnicity categories are Hispanic, black non-Hispanic, and non-black non-Hispanic. Age categories are 5-year groups up to age 75. ATUS weighted estimates of the number of persons in gender, educational attainment, and household-type cells match corresponding CPS estimates. Educational attainment is broken into two categories—more than high school and a diploma or less. The two household types are those with children and those without children.

While the Census attempts to collect the most accurate data possible, the ATUS data have limitations. Information on secondary activities (activities done at the same time as the primary activity) is not collected except for childcare. This could lead to underestimating the time people spend doing activities frequently combined with other activities. For example, ATUS estimates likely underestimate the time people spend listening to music since so many people listen to music while doing other things. Survey estimates are subject to non-sampling errors that may arise from many different sources, such as an inability to obtain information from all households in the sample, data entry errors, coding errors, and misinterpreting definitions. Errors could also occur if non-response is correlated with time use. Non-sampling errors were not measured. However, the Census Bureau uses quality-assurance procedures to minimize non-sampling data entry and coding errors in the survey estimates.

ATUS Concepts and definitions

Employed All persons who, at any time during the 7 days before the interview: 1) Did any work at all as paid employees; worked in their own business, profession, or on their farm; or usually worked 15 hours or more as unpaid workers in a family-operated enterprise; and 2) All those who were not working but had jobs or businesses from which they were temporarily absent due to illness, bad weather, vacation, childcare problems, labor dispute, maternity or paternity leave, job training, or other family or personal reasons, whether or not they were paid for the time off or were seeking other jobs.

Employed full-time workers are those who usually work 35 hours or more per week at all jobs combined.

Employed part-time workers usually work fewer than 35 hours per week at all jobs combined.

Not employed persons are not employed if they do not meet the conditions for employment. The not employed include those classified as unemployed and those classified as not in the labor force (using CPS definitions).

Household children Household children are children under age 18 residing in the household of the ATUS respondent. The children may be related to the respondent (such as their own children, grandchildren, nieces or nephews, or brothers or sisters) or unrelated (such as foster children or children of roommates or boarders). For secondary childcare calculations, respondents are asked about care for household children under age 13.

Owner/renter Respondents are asked, “are your living quarters owned, rented for cash, or occupied. Answers are coded into three groups: (1) Owned or being bought by a household member; (2) Rented for cash; (3) Occupied without payment of cash rent.

Primary activity A primary activity is the main activity a respondent was doing at a specified time.

Secondary/simultaneous activities A secondary activity is one that is done at the same time as a primary activity. ATUS does not systematically collect information on secondary activities except caring for children under age 13.

Secondary childcare Secondary childcare is care for children under 13 that is done while doing something else as a primary activity, such as cooking dinner. Secondary childcare estimates are derived by summing the durations of activities during which respondents had a household child or their own nonhousehold child under

age 13 in their care while doing other things. Secondary childcare time is further restricted to when the first household child under age 13 woke up and the last household child went to bed. It is also restricted to times the respondent was awake. If the respondent reports providing primary and secondary childcare simultaneously, that time is attributed to primary care only.

‘Where’ categories A where code is provided for each activity reported. Where codes include place codes (e.g., home, workplace, or grocery store) and in-transit codes (car, bus, or airplane).

‘Who’ categories For each activity reported, respondents are asked “who was in the room with you” or “who accompanied you?” Each household member is assigned a separate ‘Who’ code. Generic categories also exist for nonhousehold family members and for others (e.g., neighbors, friends).

Time categorization and valuation

Time categorization

The combined 2003 to 2023 ATUS three-tier coding system contains 431 classifications of time use. Activities are coded at one of 26 locations (e.g., at home, grocery store, school, etc.) except for the following activities where no ‘Where’ data were recorded: sleeping; sleeplessness; washing, dressing and grooming oneself; personal/private activities; respondent refused to provide information/“none of your business”; gap/can’t remember. For each activity performed by the respondent, data regarding who the respondent was with for up to 22 different types of people (e.g., alone, spouse, children, siblings, etc.) were recorded except for the following activities where no ‘Who With’ data were recorded: sleeping; sleeplessness; washing, dressing and grooming oneself; personal/private activities; work, main job; work, other job(s); security procedures related to work; waiting associated with working; income-generating hobbies, crafts, and food; taking class for degree, certification, or licensure; respondent refused to provide information/“none of your business”; gap/can’t remember.

The BLS states that a purpose of their arrangement of time in their published ATUS findings news release was to ensure that time use information in the United States can be compared, at broad levels, with information from other countries.⁹ In this report, the method of combining the 431 micro-categories of time use major categories for analysis is suited to focusing on time spent at non-market work within the household.¹⁰ After re-grouping the 431 micro-categories, we arrive at five major categories: Household Production, Caring and Helping, Personal Time, Leisure, and Employment and Education.

In tables 386 to 412, we show the ATUS micro-categories that comprise each DVD subgroup within each major category of time use. Each table contains the ATUS micro-categories within each subgroup and the occupations and wages used to value each subgroup of time.

Seven subgroups comprise *Household Production*: Inside Housework (Table 386); Food Cooking & Clean-up (Table 387); Pets, Home & Vehicles (Table 388);

Household Management (Table 389); Shopping (Table 390); Obtaining Services (Table 391); and, Travel for Household Activity (Table 392). All the time use in these categories is subject to secondary childcare hours, time spent with family members, time spent at home, and time spent alone.

Five subgroups comprise *Caring and Helping*: time spent for Household Children (Table 393); time spent for Household Adults (Table 394); time spent for Non-Household Members (Table 395); and, time spent at Travel for Household Members (Table 396) and Travel for Non-Household Members (Table 397). Except for Caring and Helping Household Children (Table 393), all of the time use in these categories is subject to secondary child care hours. All the time use in these categories is subject to time spent with family members, time spent at home, and time spent alone.

Five subgroups comprise *Personal Time*: Eating & Drinking (Table 398); Personal Health Care (Table 399); Grooming (Table 400); Sleeping (Table 401); and Private, Personal, or N/A (Table 402). Several primary activity use of time categories in this subgroup are not subject to secondary childcare hours, time spent with family members, time spent at home, and time spent alone because of non-coding of ‘Who’ and ‘Where’ considerations as shown in the left column of this page. Grooming allows secondary childcare but does not allow With Family or Alone classification. Sleeping does not allow secondary childcare since the respondent has to be awake to provide secondary childcare. No ‘Who’ or ‘Where’ coding was done for sleeping, preventing With Family or Alone classification of sleeping. All time use that could not be coded by the ATUS is included in the Private, Personal, or N/A subgroup. Additionally, the Private, Personal, or N/A subgroup includes time that would likely be unproductive (e.g., waiting for events to happen) or without benefit to other household members (e.g., jury duty).

Seven subgroups comprise *Leisure*: Socializing (Table 403); Passive Leisure (Table 404); Active Leisure (Table 405); Attendance Leisure (Table 406); Religious Activities (Table 407); Volunteering (Table 408); and Travel Related to Leisure (Table 409). All the time use in these categories is subject to secondary

⁹American Time Use Survey User’s Guide 2003-2023, Bureau of Labor Statistics and U.S. Census Bureau, page 2.

¹⁰ In *Time for Life*, Robinson and Godbey write on page 13 “While any division of time use into categories is arbitrary or debatable, the

time-diary method we used allows analysts who disagree with the codings to recombine the data in ways that are more suitable for them.”

childcare hours, time spent with family members, time spent at home, and time spent alone.

Three subgroups comprise *Work and Education*: Working at Job (Table 410); Educational Activities (Table 411); and, Commuting to Work or School (Table 412). Direct ‘work’ activities are not subject to secondary childcare hours, time spent with family members, time spent at home, and time spent alone because of non-coding of ‘Who’ and ‘Where’ as shown in the left column of the previous page. Secondary childcare is possible for some ‘Work’ activities or ‘Work’ activities not otherwise classified.

Time valuation

Except for working at a job, time is valued using the hourly wages plus the employer’s legally required benefit costs paid to persons whose employment requires them to perform work like many activities that people perform for themselves throughout a day. Below each of the 27 subgroups in tables 386 to 412 are the occupations chosen to represent the value of that activity. This valuation process is a ‘market replacement’ valuation method using specialist occupations. The method assigns values based on the dollar amount associated with the cost to hire a person to perform various activities. To minimize issues of productivity or efficiency by market participants versus home activity, managers and professionals were not used in the ‘specialist’ occupations chosen.

The data used to calculate the wage replacement cost for non-employment activities are from the U.S. Department of Labor’s BLS’ Occupational Employment and Wage Statistics (OEWS).¹¹ The wage data used in this report are for May 2023. The May 2023 survey encompasses 1,040 unique occupational titles. The procedure used to assign values to each sub-group of time activity was to condense the OEWS occupational wage data to a shorter list of occupations that correlate with activities that people perform to benefit themselves or their household members. We arrived at 53 occupations (see the BLS for occupational definitions under the Standard Occupational Classification (SOC) system).

The OEWS program defines wages as straight-time gross pay, excluding premium pay. Base rate, cost-of-living allowances, guaranteed pay, hazardous-duty pay,

incentive pay including commissions and production bonuses, tips, and on-call pay are included. Excluded are back pay, jury duty pay, overtime pay, severance pay, shift differentials, non-production bonuses, employer cost for supplementary benefits, and tuition reimbursements.

The concept of ‘market replacement’ valuation recognizes that the prevailing wages in an occupation do not reflect the total cost of hiring a person to perform work. At a minimum, an employer must pay the legally required benefits that are associated with employment. Data on legally required benefit costs is from the BLS’ *Employer Costs for Employee Compensation*, June 2023, table 5, part-time occupations.¹² In the BLS employment cost survey, wages and salaries are defined as the hourly straight-time wage rate or, for workers not paid on an hourly basis, straight-time earnings divided by the corresponding hours. Straight-time wage and salary rates are total earnings before payroll deductions, including production bonuses, incentive earnings, commission payments, and cost-of-living adjustments. Not included in straight-time earnings are non-production bonuses such as lump-sum payments provided in lieu of wage increases, shift differentials, and premium pay for overtime and for work on weekends and holidays; these payments are included in the benefits component. Legally required benefits are Social Security (OASDI and Medicare), federal and state unemployment insurance, workers’ compensation, and other benefits required by law, such as state temporary-disability insurance. We assigned five benefit rates (legally required benefits divided by the wage rate) based upon general occupational titles within the group using the data for part-time workers in Administrative Support; Production, transportation, and material moving; Service Occupation; Sales and related; and, Service Industries. The occupational grouping and legally required benefit rates are shown in each table 386 to 412.

We selected occupational titles from the OEWS data based on an appropriate match to the valued time activity. Some occupations are closer matches than others, and some occupations have duties that represent a low portion of the total time required in the activity and the market economy. For example, food planning in food preparation requires less time (and less workers) than preparing the food. In recognition of potential

¹¹ All the OEWS data, survey methods, and descriptions can be found at the BLS website: <https://www.bls.gov/OES/>.

Expectancy Data

Economic Demographers

mismatches with time requirements, we calculated a weighted mean wage using the number of persons employed in the United States by the occupations selected. The calculation gives more weight to the occupations selected with the most employment. The final value assigned to each consolidated group of activities is valued using the employment-weighted mean. To reduce the effect of productivity by any person at a specific task, we used the lowest-skilled occupation within an occupational grouping. For example, instead of using painters' wages in the home maintenance category, we used the lower wages of painters' helpers.

Due to survey sampling limitations and regional disparity, occupational wage information is unavailable for every occupation in every state or area. We show data corresponding to the 53 selected occupations surveyed in the United States. In Table 414, next to each state or area's name is an area wage adjustment factor. The average ratio of each area's available occupational wages and the corresponding national wage rates is this factor. The estimated value of time activities adjusted for the prevailing wages in an area can be calculated by multiplying the national value times the area wage adjustment factor.

Valuation of 'Working at Job' time is accomplished using the earnings and hours worked ATUS micro-data records for all the persons within any demographic group that reports being employed. Median hourly earnings are calculated as the average of each respondent's usual weekly earnings divided by their usual weekly hours as surveyed by the ATUS. The hourly wage can equal zero when some work activity is reported (e.g., worked without pay). The hourly wages for 2003 to 2021 are inflated to their 2023 dollar equivalence using the Employment Cost Index for All Civilian Workers.¹³ Valuation of the benefits earned during the time working at a job is based on the benefits paid by employers of all civilian workers as reported in Table 1 of the BLS' *Employer Costs for Employee Compensation*, June 2023.¹⁴ In that report, the BLS lists the June 2023 average hourly wages and salaries of all civilian workers as \$28.31 per hour worked and paid leave and supplemental pay of \$4.30 per hour worked. To avoid potential conflicts with the hourly wage calculated based on usual weekly earnings and usual weekly hours, we conservatively add wages and salaries plus vacation and supplemental pay to calculate hourly money earnings of

\$32.61. We calculate the benefit rate to apply to usual hourly earnings using the above-cited Table 1 news release data for all civilian workers' average health insurance and retirement and savings benefits (\$5.31 per hour worked) divided by average money earnings of \$32.61, which yields a 16.28% benefits rate. Tables 1 to 385 add the 16.28% benefit rate to the average usual hourly earnings in each valuation of Working at a Job.'

Table descriptions

The first set of tables in the Tables section of this report (tables 1 to 385) present the average weekly hours of activities performed by persons with similar demographic traits, along with the dollar value of a day and other time use and demographic data. In these tables, the demographic grouping is listed in the table's title. The first column of the tables, Time Use Category, lists the groupings of time use as presented and documented in tables 386 to 412. Five major categories of time use (Household Production, Caring and Helping, Personal Time, Leisure, and Work and Education) sum the time use in the sub-categories listed directly above the major category label. The second column contains average weekly hours by activity grouping. Following an ATUS-supplied formula,¹⁵ we calculate average daily hours as the sum of the benchmark-weighted population time use within each activity divided by the weighted population of all persons in the demographic group regardless of whether they performed the activity during their diary day. Under this formula, all time use during the diary day sums to 24 hours exactly. Average weekly hours are calculated by average hours on Sundays *plus* five times the average hours on weekdays *plus* the average hours on Saturdays. The sum of weekly hours equals exactly 168. Whenever a weekly average value of 0.00 appears for an activity, some time might be found in that category, but the average time use for the group is less than 0.005 weekly hours. At the bottom of the second column of the tables, the size of the U.S. population within the demographic group is shown as calculated from the ATUS weights. The average 2003-2023 pooled ATUS weighted population for persons age 15 and over equals 248,528,465. We then show the total ATUS respondents in the demographic group with a breakdown by diary day. In the pooled 2003-2023 ATUS, there were 219,368 respondents.

¹³ These data can be accessed at the BLS Internet site address <https://data.bls.gov/cgi-bin/srgate> using data code CIU10200000000001.

¹⁴ See footnote 12.

¹⁵ See section 7 of *American Time Use Survey User's Guide 2003-2023*, Bureau of Labor Statistics and U.S. Census Bureau.

The third column of Tables 1 to 385 contains the hourly value of time use for each category as presented in tables 386 to 412, in 2023 dollars. In the fourth column, we multiply the average weekly hours in column two by the average hourly value in column three and then divide by seven days in the week to get the dollar value of a day in the activity, which we then sum across all activities to compute the total dollar value of a day.¹⁶

The fifth, sixth, seventh, and eighth columns of tables 1 to 385 contain weekly at-wake hours providing secondary childcare (column five), at-wake time with a spouse, child, or parent family member present (column six), at-wake time spent at home (column seven), and at-wake time spent alone (column eight). In the *Time Categorization* section above, we listed the time use categories that do not contain ‘Who’ or ‘Where’ classifications that would lead to non-applicable (n/a) designation of average weekly hours in the activity.

To get a sense of the age and household size distribution within each demographic grouping, we show average age, 5th and 95th percentile age levels, household size, number of adults, number of children under age 18 in the household, and the median wage rate for ‘Working at Job’ at the bottom of the page.

At the bottom of the page, on the left, is a calculation estimating the household production weekly hours the respondent performs for themselves. This statistic is relevant when evaluating the portion of household production a respondent performs for themselves as opposed to the benefit of other household members or the general household. For example, a respondent does his or her clothing laundry alone, other household members’ laundry alone, all household members’ laundry together, and the household’s laundry alone (linens, curtains, rugs, etc.). The procedure for calculating household production for the benefit of the respondent is shown in Table 413.

At the bottom of the table’s right columns, we show the percent difference in mean weekly hours by major time use group of persons who own or rent their living quarters. For example, from Table 1, the demographic group performs 12.32 average weekly household production hours. The hours for those who own their living quarters are 104.5% of 12.32 average hours, or 12.87 hours. Such adjustments are valid for populations of at least 290,000 persons. Discretion should be exercised

when using the estimates for populations less than 290,000.

The ninth column of Tables 1 to 385 contains the population participation rate of performing at least one episode of the activity during the diary day. The participation rate is calculated by summing the estimated population within the demographic grouping that performed at least one daily episode of the activity divided by the total size of the U.S. population within the demographic grouping. The participation rate does not include multiple episodes of the same activity. For example, if a person reported the primary activity of eating three times during the day, they are considered as having at least one daily episode of eating. In Table 1, eating and drinking are shown as having a daily primary activity participation rate of 97.0%, which means that for 3% of the population, any of the eating or drinking they performed that day was not done as a primary activity. For example, they watched television as their primary activity and considered eating a secondary activity. Whenever a respondent does not report at least one episode of eating or drinking, the ATUS computerized questionnaire prompts the interviewer to probe the respondent for missing primary-activity eating.

The tenth and eleventh columns of Tables 1 to 385 report the lower and upper confidence intervals (95%) of the ‘Weekly Hours’ reported in the second column. These values are calculated using the ATUS’ 160 replication weights.¹⁷ Intervals are reported if greater than zero after rounding to the nearest hundredth.

Confidence intervals are also calculated for select statistics at the bottom of the table. One notable difference: the confidence intervals for ‘Working at Job’ are calculated for a subset with at least 25 respondents reporting non-zero earnings.

At the bottom of each of tables 1 to 385, we provide explanatory definitions and notes to refresh the reader’s memory of the definitions used throughout ATUS and *The Dollar Value of a Day*.

¹⁶ As noted above, ‘Working at Job’ hourly rate is measured at the median.

¹⁷ See the following Census documents for more details: <https://www.census.gov/programs-surveys/cps/technical-documentation/complete.html>.

Definitions																				
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.																			
Hourly Value:	See tables 386-412.																			
Dollar Value of a Day	Weekly hours times hourly value divided by 7.																			
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.																			
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.																			
At Home:	The respondent was inside or outside his or her own home.																			
Participation Rate:	Percent of population reporting at least one daily episode of the activity.																			
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)																			
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.																			
Household production weekly hours for the benefit of the respondent:																				
Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.																				
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

		Young children count	0.09	0.08	0.11	Pop. Size Valid %'s	Yes	Yes		
Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

		Adult count	2.07	2.02	2.11	Population (1,000s)	2,452	670		
		Young children count	1.89	1.84	1.94	Pop. Size Valid %'s	Yes	Yes		
Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

		Adult count	2.55	2.49	2.61	Population (1,000s)	3,248	398		
		Young children count	1.32	1.30	1.34	Pop. Size Valid %'s	Yes	Yes		
Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions											
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.										
Hourly Value:	See tables 386-412.										
Dollar Value of a Day	Weekly hours times hourly value divided by 7.										
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.										
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.										
At Home:	The respondent was inside or outside his or her own home.										
Participation Rate:	Percent of population reporting at least one daily episode of the activity.										
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)										
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.										
Household production weekly hours for the benefit of the respondent:		Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions											
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.										
Hourly Value:	See tables 386-412.										
Dollar Value of a Day	Weekly hours times hourly value divided by 7.										
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.										
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.										
At Home:	The respondent was inside or outside his or her own home.										
Participation Rate:	Percent of population reporting at least one daily episode of the activity.										
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)										
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.										
Household production weekly hours for the benefit of the respondent:		Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions											
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.										
Hourly Value:	See tables 386-412.										
Dollar Value of a Day	Weekly hours times hourly value divided by 7.										
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.										
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.										
At Home:	The respondent was inside or outside his or her own home.										
Participation Rate:	Percent of population reporting at least one daily episode of the activity.										
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)										
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.										
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Dollar Value of a Day										
Secondary Child Care:										
With Family:										
At Home:										
Participation Rate:										
CI Lower and Upper										
% of Mean Hours:										
Household production weekly hours for the benefit of the respondent:										
Note:										

Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.
See tables 386-412.

Weekly hours times hourly value divided by 7.

While performing a primary activity, at wake children under age 13 were in the respondent's care.

At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.

The respondent was inside or outside his or her own home.

Percent of population reporting at least one daily episode of the activity.

Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)

Adjustment percentage to weekly hours based on whether living quarters are owned or rented.

Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.

'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

At Home:										
Participation Rate:										
CI Lower and Upper										
% of Mean Hours:										
Household production weekly hours for the benefit of the respondent:										
Note:										

Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.
See tables 386-412.

Weekly hours times hourly value divided by 7.

While performing a primary activity, at wake children under age 13 were in the respondent's care.

At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.

The respondent was inside or outside his or her own home.

Percent of population reporting at least one daily episode of the activity.

Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)

Adjustment percentage to weekly hours based on whether living quarters are owned or rented.

Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.

'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions											
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.										
Hourly Value:	See tables 386-412.										
Dollar Value of a Day	Weekly hours times hourly value divided by 7.										
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.										
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.										
At Home:	The respondent was inside or outside his or her own home.										
Participation Rate:	Percent of population reporting at least one daily episode of the activity.										
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)										
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.										
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.										
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

		Young children count	1.55	1.43	1.67	Pop. Size Valid %'s	Yes	No		
Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)

Adjustment percentage to weekly hours based on whether living quarters are owned or rented.

Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.

'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.										
Household production weekly hours for the benefit of the respondent:		Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.

CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions																				
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.																			
Hourly Value:	See tables 386-412.																			
Dollar Value of a Day	Weekly hours times hourly value divided by 7.																			
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.																			
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.																			
At Home:	The respondent was inside or outside his or her own home.																			
Participation Rate:	Percent of population reporting at least one daily episode of the activity.																			
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)																			
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.																			
Household production weekly hours for the benefit of the respondent:																				
Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.																				
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

		Young children count	0.00	0.00	0.00	Pop. Size Valid %'s	Yes	Yes		
Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

		Median wage w/ benefits	\$30.52	\$29.29	\$32.06	Leisure	100.0%	99.6%		
		Household Size	4.15	4.07	4.23	Work and Education	101.3%	95.3%		
Adult count		Adult count	2.19	2.15	2.22	Population (1,000s)	2,630	652		
		Young children count	1.96	1.89	2.04	Pop. Size Valid %'s	Yes	Yes		
Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions											
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.										
Hourly Value:	See tables 386-412.										
Dollar Value of a Day	Weekly hours times hourly value divided by 7.										
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.										
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.										
At Home:	The respondent was inside or outside his or her own home.										
Participation Rate:	Percent of population reporting at least one daily episode of the activity.										
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)										
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.										
Household production weekly hours for the benefit of the respondent:		Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions											
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.										
Hourly Value:	See tables 386-412.										
Dollar Value of a Day	Weekly hours times hourly value divided by 7.										
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.										
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.										
At Home:	The respondent was inside or outside his or her own home.										
Participation Rate:	Percent of population reporting at least one daily episode of the activity.										
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)										
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.										
Household production weekly hours for the benefit of the respondent:		Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

CI Lower and Upper										
% of Mean Hours:										
Household production weekly hours for the benefit of the respondent:										
Note:										

Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.
See tables 386-412.

Weekly hours times hourly value divided by 7.

While performing a primary activity, at wake children under age 13 were in the respondent's care.

At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.

The respondent was inside or outside his or her own home.

Percent of population reporting at least one daily episode of the activity.

Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)

Adjustment percentage to weekly hours based on whether living quarters are owned or rented.

Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.

'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Dollar Value of a Day										
Secondary Child Care:										
With Family:										
At Home:										
Participation Rate:										
CI Lower and Upper										
% of Mean Hours:										
Household production weekly hours for the benefit of the respondent:										
Note:										

Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.
See tables 386-412.

Weekly hours times hourly value divided by 7.

While performing a primary activity, at wake children under age 13 were in the respondent's care.

At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.

The respondent was inside or outside his or her own home.

Percent of population reporting at least one daily episode of the activity.

Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)

Adjustment percentage to weekly hours based on whether living quarters are owned or rented.

Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.

'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Dollar Value of a Day										
Secondary Child Care:										
With Family:										
At Home:										
Participation Rate:										
CI Lower and Upper										
% of Mean Hours:										
Household production weekly hours for the benefit of the respondent:										
Note:										

Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.
See tables 386-412.

Weekly hours times hourly value divided by 7.

While performing a primary activity, at wake children under age 13 were in the respondent's care.

At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.

The respondent was inside or outside his or her own home.

Percent of population reporting at least one daily episode of the activity.

Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)

Adjustment percentage to weekly hours based on whether living quarters are owned or rented.

Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.

'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.											

Table 192. Married women, Disabled and unable to work, Regardless of spousal employment, Ages 55 & over, Living with spouse only

Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

		Adult count	2.09	2.04	2.15	Population (1,000s)	1,340	1,065		
		Young children count	2.39	2.33	2.45	Pop. Size Valid %'s	Yes	Yes		
Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

		Young children count	1.40	1.31	1.50	Pop. Size Valid %'s	Yes	No		
Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour. See tables 386-412.									
Hourly Value:	Weekly hours times hourly value divided by 7.									
Dollar Value of a Day	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
Secondary Child Care:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
With Family:	The respondent was inside or outside his or her own home.									
At Home:	Percent of population reporting at least one daily episode of the activity.									
Participation Rate:	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
CI Lower and Upper	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
% of Mean Hours:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Household production weekly hours for the benefit of the respondent:										
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

		Median wage w/ benefits		\$16.56	\$14.62	\$23.37	Leisure	101.6%	90.1%			
Percentage of Total Household Production Weekly Hours Benefiting the Respondent	13.2%	Household Size		2.75	2.64	2.86	Work and Education	71.9%	230.5%			
		Adult count		2.75	2.64	2.86	Population (1,000s)	675	131			
		Young children count		0.00	0.00	0.00	Pop. Size Valid %'s	Yes	No			
Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

At Home:										
Participation Rate:										
CI Lower and Upper										
% of Mean Hours:										
Household production weekly hours for the benefit of the respondent:										
Note:										

Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.
See tables 386-412.

Weekly hours times hourly value divided by 7.

While performing a primary activity, at wake children under age 13 were in the respondent's care.

At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.

The respondent was inside or outside his or her own home.

Percent of population reporting at least one daily episode of the activity.

Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)

Adjustment percentage to weekly hours based on whether living quarters are owned or rented.

Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.

'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions											
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.										
Hourly Value:	See tables 386-412.										
Dollar Value of a Day	Weekly hours times hourly value divided by 7.										
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.										
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.										
At Home:	The respondent was inside or outside his or her own home.										
Participation Rate:	Percent of population reporting at least one daily episode of the activity.										
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)										
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.										
Household production weekly hours for the benefit of the respondent:		Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

		Young children count		2.39	2.09	2.69	Pop. Size Valid %'s	No	No			
Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

		Young children count	2.09	1.90	2.27	Pop. Size Valid %'s	Yes	Yes		
Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

		Young children count	0.00	0.00	0.00	Pop. Size Valid %'s	Yes	Yes		
Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Household Production Weekly Hours for the Benefit of the Respondent	4.34	Average Age	64.05	63.65	64.44	Household Production	108.7%	92.3%		
		5th Percentile Age	55.00	55.00	56.00	Caring and Helping	102.0%	100.8%		
		95th Percentile Age	80.00	80.00	85.00	Personal Time	99.7%	100.1%		
		Median wage w/ benefits	\$14.88	\$12.94	\$24.80	Leisure	98.0%	101.9%		
Percentage of Total Household Production Weekly Hours Benefiting the Respondent	25.6%	Household Size	1.52	1.46	1.59	Work and Education	107.2%	97.3%		
		Adult count	1.52	1.46	1.59	Population (1,000s)	824	866		
		Young children count	0.00	0.00	0.00	Pop. Size Valid %'s	Yes	Yes		
Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Household Production Weekly Hours for the Benefit of the Respondent	5.23	Average Age	64.50	64.07	64.93	Household Production	115.5%	88.6%		
		5th Percentile Age	56.00	56.00	57.00	Caring and Helping	95.4%	106.7%		
		95th Percentile Age	80.00	80.00	85.00	Personal Time	100.4%	99.5%		
		Median wage w/ benefits	\$14.88	\$11.66	\$25.12	Leisure	95.3%	103.7%		
Percentage of Total Household Production Weekly Hours Benefiting the Respondent	31.2%	Household Size	1.00	1.00	1.00	Work and Education	107.5%	89.3%		
		Adult count	0.99	0.99	1.00	Population (1,000s)	466	624		
		Young children count	0.01	0.00	0.01	Pop. Size Valid %'s	Yes	Yes		
Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Dollar Value of a Day										
Secondary Child Care:										
With Family:										
At Home:										
Participation Rate:										
CI Lower and Upper										
% of Mean Hours:										
Household production weekly hours for the benefit of the respondent:										
Note:										

Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.
See tables 386-412.

Weekly hours times hourly value divided by 7.

While performing a primary activity, at wake children under age 13 were in the respondent's care.

At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.

The respondent was inside or outside his or her own home.

Percent of population reporting at least one daily episode of the activity.

Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)

Adjustment percentage to weekly hours based on whether living quarters are owned or rented.

Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.

'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions												
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.											
Hourly Value:	See tables 386-412.											
Dollar Value of a Day	Weekly hours times hourly value divided by 7.											
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.											
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.											
At Home:	The respondent was inside or outside his or her own home.											
Participation Rate:	Percent of population reporting at least one daily episode of the activity.											
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)											
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.											
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.											
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

		Median wage w/ benefits	\$18.33	\$16.89	\$20.15	Leisure	98.3%	108.2%		
Percentage of Total Household Production Weekly Hours Benefiting the Respondent	22.5%	Household Size	1.70	1.68	1.73	Work and Education	97.9%	114.7%		
		Adult count	1.65	1.63	1.68	Population (1,000s)	9,112	1,798		
		Young children count	0.05	0.04	0.06	Pop. Size Valid %'s	Yes	Yes		
Definitions										
Weekly Hours:	Mean daily minutes performed by the respondent multiplied by 7 days per week divided by 60 minutes in an hour.									
Hourly Value:	See tables 386-412.									
Dollar Value of a Day	Weekly hours times hourly value divided by 7.									
Secondary Child Care:	While performing a primary activity, at wake children under age 13 were in the respondent's care.									
With Family:	At least one primary family member (spouse, child, or parent) was in the room or accompanied the respondent.									
At Home:	The respondent was inside or outside his or her own home.									
Participation Rate:	Percent of population reporting at least one daily episode of the activity.									
CI Lower and Upper	Confidence interval (95%) using ATUS replication weights ("n/a" for rounded values equal to or less than zero)									
% of Mean Hours:	Adjustment percentage to weekly hours based on whether living quarters are owned or rented.									
Household production weekly hours for the benefit of the respondent:	Respondent-related household production divided by the respondent's household size plus 1 plus an additional 1 if the respondent's household size is greater than 1. The percentage of the total household production weekly hours benefiting the respondent is respondent-benefit household production weekly hours divided by total weekly hours of household production. See Table 413 for description.									
Note:	'Who' and 'Where' coding only during waking hours and not coded for sleeping, grooming, some personal and work activities. Percentage of mean hours valid for populations greater than 290,000.

Activity Examples within ATUS Activity Codes as Published by the BLS

Attending American Field Service activities, inc mtgs; attending Key Club activities, including meetings; attending National Honor Society activities; attending a seminar (degree, certificate, or license); attending band practice; attending choir practice as extracurricular school activity; attending class (degree, certificate, or license); attending class, reason unknown; attending language club activities; attending math club activities; attending own graduation ceremony; attending pep club activities; attending play practice; attending practicum/internships (degree, certificate, or license); attending science club activities; attending student government meetings; attending study group (degree, certificate, or licensure); attending study hall; auditing a course (degree, certificate, or license); being searched at security checkpoint (taking classes); enrolling in class (degree, certificate, or licensure); getting ID for class (degree, certificate, or licensure); getting parking pass for class (degree, certificate, or licensure); having a free period; having detention; listening to a lecture (degree, certificate, or license); listening to language cd (degree, certificate, or licensure); looking at course descriptions/listings (degree, certificate, or licensure); opening bags for security search (taking classes); organizing notes (degree, certificate, or licensure); participating in academic club activities, inc meetings; participating in chess club activities, inc. meetings; passing through metal detector (taking classes); paying tuition/fees for class (degree); practicing for debate club competition; preparing for SAT; preparing for student govt elections; preparing for the GRE; preparing for the LSAT; reading (degree, certificate, or licensure); reading the Bible/scriptures (degree, certificate, or licensure); reading/sending e-mail (degree, certificate, or licensure); registering for CPA exam; registering for GMAT; registering for GRE; registering for LSAT; registering for MCAT; registering for SAT; registering for class (degree, certificate, or licensure); registering for test prep class; studying (degree, certificate, or licensure); studying for the CPA exam; studying for the GMAT; studying for the GRE; studying for the LSAT; studying for the SAT; taking GMAT prep course; taking GRE prep course; taking LSAT prep course; taking SAT prep course; taking a CPA prep course; taking a field trip (degree, certificate, or license); taking exams (degree, certificate, or license); taking on-line course (degree, certificate, or license); talking on phone to a principal; talking on phone to a professor; talking on phone to a school cafeteria worker; talking on phone to a school nurse; talking on phone to a teacher; talking on phone to an instructor; talking to classmates (degree, certificate, or license); talking to teacher (degree, certificate, or license); waiting for an after-school meeting to start; waiting for band practice to start; waiting for study group; waiting for the teacher; waiting in line to pay tuition/fees; waiting in line to register/get ID; waiting to enroll in class; writing paper/essay (degree, certificate, or licensure).

Table 411, continued. Educational Activities: Activities and Valuation

SOC Occupation Used to Value Activity	SOC	Employment (5/2023)	Mean wage (5/2023)	Weight	Weighted Wage
Social and Human Service Assistants	21-1093	409,310	\$21.27	1.000	\$21.27
		409,310	\$21.27		\$21.27
Service Industries	Legally Required Benefits		10.0%		10.0%
Hourly Mean Wage with Legally Required Benefits			\$23.41		\$23.41

Table 412. Commuting to Work or School: Activities and Valuation**ATUS Activity Codes used in this DVD Time Use Grouping**

- 180501: Traveling-Travel related to working
 180502: Traveling-Travel related to work-related activities
 180589: Traveling-Travel related to work, n.e.c.*
 180601: Traveling-Travel related to taking class
 180682: Traveling-Travel related to education (except taking class)
 180699: Traveling-Travel related to education, n.e.c.*

SOC Occupation Used to Value Activity	SOC	Employment (5/2023)	Mean wage (5/2023)	Weight	Weighted Wage
Passenger Vehicle Drivers	53-3050	779,210	\$22.25	1.000	\$22.25
		779,210	\$22.25		\$22.25
Service Occupation	Legally Required Benefits		11.2%		11.2%
Hourly Mean Wage with Legally Required Benefits			\$24.75		\$24.75

Table 413. Methodology to Calculate Household Production Weekly Hours for the Benefit of the Respondent**ATUS Activity Codes used to Determine Household Production Weekly Hours Benefiting the Respondent**

020102 Laundry; 020103 Sewing, repairing, & maintaining textiles; 020201 Food and drink preparation; 020202 Food presentation; 020203 Kitchen and food clean-up; 020299 Food & drink prep, presentation, & clean-up, n.e.c.*; 020701 Vehicle repair and maintenance (by self); 020799 Vehicles, n.e.c.*; 020902 Household & personal organization and planning; 020903 HH & personal mail & messages (except e-mail); 070101 Grocery shopping; 070102 Purchasing gas; 070103 Purchasing food (not groceries); 070104 Shopping, except groceries, food and gas; 070105 Waiting associated with shopping; 070199 Shopping, n.e.c.*; 070201 Comparison shopping; 070299 Researching purchases, n.e.c.*; 070301 Security procedures rel. to consumer purchases; 070399 Security procedures rel. to consumer purchases, n.e.c.*; 079999 Consumer purchases, n.e.c.*; 090102 Using meal preparation services; 090103 Using clothing repair and cleaning services; 160104 Telephone calls to/from salespeople; 180701 Travel related to grocery shopping; 180782 Travel related to shopping (except grocery shopping); 180899 Travel rel. to using prof. & personal care services, n.e.c.*.

Formula to determine Household Production Weekly Hours for the Benefit of the Respondent:

R_{HHP} = Household Production Weekly Hours for the Benefit of the Respondent

A_{HHP} = Household Production Weekly Hours used to Determine Household Production Benefiting the Respondent

H = Household Size (number of persons living in each sample household)

W_H = Weight for the Household Production Weekly Hours for the Household = 1

W_J = Weight for the Household Production Weekly Hours Subject to Joint Consumption by Household Members = 1 if $H > 1$

$$R_{HHP} = \frac{A_{HHP}}{H + W_H + W_J}$$
